

Stratus Solutions transitioned a **USG Intelligence Community research organization** from on premise VMWare and OpenStack virtualized infrastructure to a hybrid cloud utilizing Amazon Web Services (AWS). This enabled the organization access to previously unavailable commercial development tools to **accelerate their research studies** and **easily scale projects at a fraction of the cost** of expanding their on-premise hardware.

The success of this project provided the organization visibility to senior government officials. As a result, Stratus is currently leading 2 additional revolutionary pilot implementations to provide **up to 20K developers and researchers access to AWS resources.**

Ultimately, this game changing approach will **enable the entire agency to expand their talent pool**, leveraging engineers without top security clearances to build more robust solutions to meet evolving mission requirements.

About Stratus Solutions

Stratus Solutions is a technology partner that enables purpose-led organizations to achieve more. Headquartered in Fulton, MD, we provide forward-thinking experts to help government and commercial organizations solve their biggest cloud infrastructure, DevOps and cyber security challenges to advance their mission.
